## Square 9 Softworks Releases Version 2.2.3 of the SmartSearch Content Management Suite

NEW HAVEN, CONN., February 2, 2009 — Square 9 Softworks, a leading developer of innovative, business-centric software solutions, announced today the release of version 2.2.3 of its award-winning SmartSearch Content Management Suite.

With version 2.2.3, many SmartSearch features previously available only to early adopters of the KeyFree Indexing option are now available for all users with an active support agreement. Several key core product changes deliver a more diverse solution, allowing users to resolve more of their document-centric business processes with SmartSearch.

"Square 9 Softworks remains committed to delivering exceptional value by continually offering new features and enhancements that enable SmartSearch users to achieve greater efficiency and productivity in their organizations," said Stephen Young, president and CEO of Square 9 Softworks. "We look forward to our customers and partners taking full advantage of the new functionality available in SmartSearch 2.2.3."

SmartSearch 2.2.3 incorporates these features and enhancements:

- **Electronic Document Viewing Support (Edocs)** – SmartSearch 2.2.3 supports several new electronic document formats including the popular Microsoft Office suite. Word, Excel, Outlook and HTML documents can now be archived and viewed natively with the SmartSearch viewer. Version 2.2.3 also supports a launch functionality that will allow the storage of virtually any file type with the ability to quickly port the content back to its original file format.
- **E-mail Notification** – This function provides an exciting new workflow component within the core SmartSearch product that notifies users when a document has arrived so that they may give it their attention. The arrival of a document within an archive triggers an e-mail that may be customized to contain index information or even HTML rich content.
- **Data XChange** – Designed to further reduce capture and indexing time, SmartSearch 2.2.3 introduces a new internal database lookup utility called Data XChange, which eliminates redundant data entry by sharing common index data across archives based on a unique "key" index field or fields. For example, an accounts payable clerk indexing a vendor invoice might enter only the purchase order number of a previously indexed purchase order and then update the vendor name, order date or cost center by clicking the Data XChange button.

(more)

- **Enhanced Bar Code Support** – SmartSearch 2.2.3 now includes support for the popular Code 128 and Codeabar bar code formats.
- **Duplicate Documents** – In response to frequent requests from customers and partners, SmartSearch 2.2.3 now gives users the ability to duplicate documents for archiving in multiple locations.
- **Feature Access Permissions** – SmartSearch 2.2.3 takes document security—always a paramount consideration—up a notch with feature level security. Administrators can now control whether a user can print, e-mail or launch a document, to name just several examples. This function extends the standard add, modify, delete and view privileges in earlier versions.

The SmartSearch Content Management Suite is a feature-rich solution suite that organizations of all sizes use to manage their documents electronically, driving efficiency and productivity across all business processes. Built for content management on the .NET platform using an open architecture design, SmartSearch is a scalable, value-driven solution that is easy to use, learn and support. From small businesses to the Fortune 500, organizations that rely on document-intensive processes use SmartSearch to manage documents electronically and streamline their workflow as they eliminate inefficient paper-based filing systems.
